

Skin typing assessment quiz

One of the most important factors in deciding which Laser/IPL™ (and settings) to use is the patient skin type. Skin typing is determined by genetics, reaction of the skin to sun exposure and tanning habits. The following skin type quiz¹ is intended *as a sample only* to provide additional help in the evaluation of an individual skin type. *Skin typing of the area to be treated* is to be assessed. Lumenis takes no liability on that document and its content is not intended to be a substitute for professional medical diagnosis.
